

SUSTAINABLE PROCUREMENT POLICY

01: Introduction

Founded in 2008, Enlight develops, finances, constructs, owns, and operates utility-scale renewable energy projects. Enlight operates across the three largest renewable segments today: solar, wind and energy storage. A global platform, Enlight operates in the United States, Israel and Europe. Enlight has been traded on the Tel Aviv Stock Exchange since 2010 and completed its US IPO in 2023.

We place highest importance to the conduct of the suppliers and organizations with whom we engage to develop, construct and operate utility-scale renewable energy projects.

We view our extensive supply chain, spread over three continents and across various markets, as an extension of our business and therefore we aim to ensure the same high standards are observed throughout our procurement and supply chain. We act with integrity with our suppliers and expect our suppliers to adhere strict standards of ethical and sustainable conduct.

02: Sustainable Procurement

At Enlight, we believe that sustainability is a shared responsibility. As our mission is to accelerate the shift to green energy, our environmental and sustainability goals are inherent in our processes. We have embedded in every function, including procurement, playing a key role in establishing a clear and transparent link with our entire supply chain.

Our corporate culture mirrors ethical standards, professionalism, integrity, and full compliance. Furthermore, we create and sustain value for shareholders and all stakeholders – employees, customers, suppliers, local communities, and society at large.

We acquire equipment from reliable and fair-trade sources while empowering local communities as much as possible to contribute to local economies. We have longstanding partnerships with manufacturers who provide us with equipment that meets our highest standards.

We believe in forming a corporate culture that mirrors ethical standards, professionalism, integrity and full compliance. Furthermore, it means creating and sustaining value for shareholders and all stakeholders - employees, customers, suppliers, local communities, and society at large.

Supply Chain Due Diligence

As part of its ongoing supplier management, Enlight doesn't knowingly engage suppliers that do not meet Enlight's requirements in legal, financial, environmental, social, human rights and governance matters.

03: Our Sustainable Procurement Goals

- Optimize the delivery and usage of products and services in our production process;
- Minimize environmental impact by optimizing the use of natural resources;
- Manage risk and improve internal and external standards through performance assessments across the supply chain;
- Promote and enable innovation across our supply markets;
- Drive adoption of sustainable practices across the supply chain;
- Purchasing equipment from reliable sources that adhere to fair trade, with a clear preference for local businesses and workers, in a way that contributes to the local economy;
- Encourage suppliers to adopt sustainable practices, including waste reduction, pollution prevention, and carbon footprint reduction;
- Prioritize suppliers who demonstrate environmental responsibility and sustainability in their operations;
- Give preference to products and services with a lower environmental impact, such as energy-efficient equipment, renewable energy sources, and recyclable materials;
- Promote public procurement practices that are sustainable and in accordance with national policies and priorities.
